Note 1: Measurement is made as per JIS K6911, where voltage is raised at a rate of 4 kv/second, and the dielectric breakdown strength is obtained by dividing the breakdown voltage by the thickness.

Note 2: Measurement is made as per JIS K6911, where main electrode of outer diameter of 50mm, guard electrode of inner diameter of 70mm, and counter electrode with diameter of 90mm are used.

All technical information and data are typical values , and are not standard value.

These values might change without previous notice.
